SUMMARY

Data Engineer with strong experience in designing, building, and optimizing end-to-end data pipelines and ETL processes across cloud and on-premises environments. Proficient in **SSIS**, **Azure Data Factory**, **PySpark**, and **Python** for developing scalable data workflows and automation solutions. Skilled in **SQL** and **SSMS** for managing and transforming large datasets, and experienced in **data warehousing**, **data modeling**, and performance tuning. Adept in using **Power BI** to create insightful, real-time dashboards and reports that support business intelligence and data-driven decisions. Hands-on expertise in **Azure Cloud** services, with a focus on delivering reliable, secure, and high-performing data solutions.

PROFESSIONAL EXPERIENCE

Wipro Technologies, Pune, India: Project Engineer

1/2020 - 2/2021

- Performed data migration from Excel to Component Interface (CI) using SQL Server, ensuring accurate mapping and validation of HR records.
- Developed end-to-end data workflows, including extraction, data validation, and integration into SQL Server databases to enable accurate and efficient reporting.
- Automated data loading processes using **SQL scripts and batch jobs**, substantially reducing manual effort and minimizing data entry errors.

Eastman Chemicals PVT LTD, Hyderabad, India: Business Intelligence Developer

3/2021 - 7/2023

- Designed and managed **Azure Data Factory pipelines** and **SSIS packages**, reducing data processing time by **30%**.
- Utilized **PySpark** within Azure Data Factory pipelines, increasing data processing throughput by **40%** for large-scale datasets.
- Created and maintained complex stored procedures and user-defined functions to support ETL workflows, ensuring modular, reusable, and optimized SQL logic across staging and reporting layers.
- Developed complex **stored procedures** and user-defined functions using **SQL** on staging environments, improving data loading efficiency by **25%**.

University of North Texas: Intern (Big Data, Data Science)

07/2024 - 5/2025

- Designed and implemented an ETL pipeline using AWS Glue (PySpark) to consolidate and transform multi-departmental attendance data, improving reporting consistency and reducing manual effort by 80%.
- Built and optimized **Redshift data warehouse schemas** to store cleaned attendance and academic data, enabling sub-second analytical queries across historical student records.
- Developed interactive **Power BI dashboards** to visualize attendance trends, course-level insights, and dropout risk flags, enhancing decision-making for faculty and academic advisors.

PROJECTS

DruvAI – AI Powered Personal Assistant

Developed a multi-agent AI assistant using **Flask**, **LangChain** + **ReAct** enabling autonomous orchestration of tasks via **Google Calendar**, **Gmail**, **Canvas LMS APIs**, **Web Search** and more. Integrated **LLMs via OpenRouter** for real-time intent recognition and tool invocation, supporting seamless automation.

EDUCATION

Master of Science, Computer Science

May 2025

University of North Texas, Denton, TX

3.9 GPA

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Tools & Technologies: Git, GitHub, Visual Studio, Azure Data Factory, SSIS, PowerBI, Power Automate, SSMS, AWS

Web Development: HTML, CSS, ReactJS, MySQL, NodeJS, Express

Data Engineering: PySpark, Data Warehousing, ETL Processes, Data Integration

Data Science: Pandas, Data Visualization, Machine Learning, Natural Language Processing (NLP), Decision Trees, Classification, Regression, Clustering

Artificial Intelligence: LLM's, Agentic AI, LangChain
